

```
1 // Create post button
2 const createPostButton = document.getElementById('create-post');
3
4 createPostButton.addEventListener('click', () => {
5     const title = prompt('Enter post title:');
6     const content = prompt('Enter post content:');
7
8     // Store post data in local storage
9     localStorage.setItem('posts', JSON.stringify([...JSON.parse(localStorage.getItem('posts')) || [], {
10         title,
11         content
12     }]));
13     // Refresh the page to display the new post
14     location.reload();
15 });
```

---

Output:

index.js:2

```
const createPostButton = document.getElementById('create-post');
```
